Synopsis: Portfolio Analysis – Mercedes vs Dior

This portfolio presents a comparative financial review of Mercedes-Benz Group AG (MBG.DE) and Christian Dior SE (CDI.PA) for the period from March 2025 to March 2026. The analysis includes historical price data in USD, weekly returns, key descriptive statistics, risk metrics, regression analysis, and hypothesis testing.

1. Data Overview

- **Mercedes (Sheet 1):** Weekly open, high, low, close, and adjusted closing prices in USD.
- **Dior (Sheet 2):** Similar dataset with weekly pricing converted to USD.
- **Combined Data (Sheet 3):** Consolidated weekly closing prices for both assets with computed weekly returns. Descriptive statistics calculated include Maximum, Minimum, Range, Quartiles, Interquartile Range, Fences, Mean, Z-scores, Mean Absolute Deviation, Sample Variance, Standard Deviation, Coefficient of Variation, Covariance, and Correlation between Mercedes and Dior returns.

2. Risk Assessment and Sharpe Ratio (Sheet 4):

Performed a comparative risk evaluation using an F-Test to examine whether the variance of returns differs significantly between Mercedes and Dior. The Sharpe Ratio is calculated for each asset to evaluate risk-adjusted performance.

3. Market Regression Analysis (Sheets 5 and 6):

Historical weekly data of the S&P 500 index (in USD) was used to run regression analyses. Sheet 5 compares Mercedes' weekly returns with the S&P 500, while Sheet 6 shows the regression of Dior's returns against the index. Excel was used for all computations, including beta coefficients, R-squared, and residual analysis.

This portfolio demonstrates the ability to gather, clean, and analyze financial datasets, perform quantitative risk assessments, and apply regression techniques for comparative investment insights.
